

Customer Testimonial

Problem

Wireless signal does not reach office in outbuildings

Solution

iPowerline connects into the property's electricity circuit which runs through entire plot, allowing connection anywhere on the site.

Benefits

No cabling to run through garden and patios

No interference from neighbours' systems

Higher Security as it can't be tapped into

*"I had an external office built at home and needed a way to get it connected to the bt-broadband in the house - **too far to get wireless.***

The office was on a different spur to the main house so I was worried it wouldn't be able to get a signal down the 30m to the shed (through all the external cabling).

I needn't have worried - it all worked like a charm and was very quick as well. It copes brilliantly with transferring my big files over the system and I'm getting my full 8mbps broadband like a charm."
