

## Customer Testimonial

### **Problem**

Could not get wireless signal everywhere in the house but still wanted to retain flexibility of wireless

### **Solution**

**iPowerline** can be used to boost the signal of wireless transmitters which can be hindered by structural or other interferences

### **Benefits**

**No cabling** was used anywhere

**Stronger signal** can now be received everywhere

**Integrates** with wireless to allow flexibility

*“We have been using a wireless network for the last couple of years and have upgraded to the latest versions to get faster speed and better coverage.*

*However, even our latest wireless network would not cover our whole house.*

*Integrating **iPowerline** with two additional wireless access points, the guys at **Red** fixed our problem without having to run any additional cabling.*

*The wireless signal is now 100% throughout my entire home.*

*Installation was completed in under an hour! Excellent!”*
